

## 8-fold turnout decoder DCC

Art. No.: 10775

€89,90

8-fold turnout decoder DCC.

The turnout decoder can switch up to eight turnouts. If light signals are used, one needs one double-spool relay (Item no.: 10019) per signal. All outputs are short-circuit proof. Overall, the decoder can be loaded with up to 2 Ampere; this also applies to every single connection for the period of one second!

The address range is between 1 and 256. The connection is made with two cables onto the two rail profiles.

If a high output is required, of course it is possible to create one's own supply network, which is supplied out of a booster of its own.

### Specifications:

#### Electrical

Decoder mode	DCC
