

# Steam locomotive 86.241, ÖBB

Epoch:

Art. No.:

Steam locomotive 86.241 of the Austrian Federal Railways.

- Short cut-out water tank in a welded design
- Rich detailing on the model with many separately applied plug-in parts
- Unobstructed view through the driver's cab windows
- Set of elaborately designed metal wheels
- The model feature all typical ÖBB characteristics such as the whistle.

The steam locomotive class 86 was a standard locomotive with tender which was built in large quantities by numerous German locomotive factories for the German Reichsbahn. After the war some of the steam locomotives remained in Austria and were used for the passenger and freight transport. The locomotive also hauled heavy ore trains of the series 52 - which definitely was her most spectacular mission ! The locomotives had their main bases at the firing houses Hieflau, Selzthal, Linz, Bischofshofen and St. Veit (Glan). They were scrapped in 1972.

## Specifications:

### General data

Number of axles with traction tyres	1
Number of driven axles	4
Coupling	NEM shaft 362 with close coupling mechanism
Minimum radius	358 mm
Smoke generator retrofittable	yes
Smoke generator Article number (analog)	Seuthe Nr. 10
Smoke generator Article number (digital)	Seuthe Nr. 11

### Electrical

Head light	Direction dependent dual headlights
Interface	Electrical interface for traction units PluX22
LED head light	yes

### Measurements

**Measurements**

---

Length over buffer

160 mm
