

Steam locomotive class 85, kkStB

Epoch:

Art. No.: 73157

Steam locomotive class 85 of the Imperial-Royal Austrian State Railways.

- Rich detailing on the control
- Model with many separately applied plug-in parts

When the main railway lines were essentially extended, the advantages of the developed economic areas became apparent; however, remote areas lagged behind. So the kkStB wanted to push these regions and build "secondary railway lines". With the construction of the unsophisticated local railways, many towns and villages could be connected to the big, wide world.

Specifications:

General data

Coupling	NEM shaft 362 with close coupling mechanism
Minimum radius	358 mm
Number of driven axles	2
Flywheel	yes

Electrical

Interface	Electrical interface for traction units PluX16
Head light	Direction dependent dual headlights
Digital decoder	PluX16
Decoder type	MX648P16
Sound	yes
LED head light	yes

Measurements

Length over buffer	79 mm
